

Anatomic Veterinary Pathologist

Founded in 2012, VETODIAG is a growing private veterinary analysis laboratory, recognized and appreciated by many colleagues throughout France.

It brings together a team of nearly 30 people, friendly and enthusiastic (including 7 veterinarians – 6 certified specialists in Anatomic Pathology and Clinical Pathology), within a modern and very complete technical platform.

We are situated in the Normandy countryside (North West France) offering a charming and relaxing environment, and we propose a large diagnostic activity (clinical pathology, histopathology, PCR, serology, microbiology, ...) for canine, feline and equine species.

This is great opportunity for a qualified Pathologist to join our team. We provide you with flexible working hours (80% - 100%) and very good working conditions (teleworking, exchange/teaching and improved ergonomics thanks to the digitization of the slides, high-performance histology platform, very competent and attentive technicians).

Responsibilities will include the interpretation of histopathological (+/- cytological) samples. The work is challenging and satisfying with support for personal and professional development.

Candidates need to have a solid knowledge and thorough experience in the pathology of domestic animals. ECVP or ACVP diplomates will be granted primary consideration. Applicants must be fluent in French.

For questions and/or application please contact.
